EXPERIENCE

DIGITAL INNOVATION INTERN • JUNE – AUGUST 2024 • HSBC UK

Worked on cloud engineering team for 10 weeks. Wrote python scripts to analyse cloud real estate and suggest potential cost saving opportunities. Identified over £320K of potential annual savings opportunities.

CONTRACT & FREELANCE ILLUSTRATOR • APRIL 2022 – CURRENT • WINDMILL SLAM GAMES & SELF-EMPLOYED

Illustrated for an indie game by former lead software engineer of Wizards of the Coast. Involved creative input, responding to **rounds of feedback, communication**, developing art style and anticipating client needs. Artwork featured in Steam Strategy Fest and Seattle Indies Expo.

MATHEMATICS TUTORING • JULY 2021 – MAY 2022 • SELF-EMPLOYED

Offered mathematics tutoring services to students in years 5 and 11. **Explained mathematical concepts** in a manner suited to the students, while going over **prepared material** and evaluating student progress.

EDUCATION

MATHEMATICS BSC • OCTOBER 2022 – PRESENT (UNTIL JUNE 2026) • IMPERIAL COLLEGE LONDON

Currently a second-year undergraduate in Mathematics at Imperial College London. **Achieved Dean's List (78%)** in first year and **83%** in second year. Specialised in probability, statistics, and computation.

A LEVELS • JUNE 2022 • THE SIXTH FORM COLLEGE FARNBOROUGH

Earned A*s in A level Computer Science, Physics, Mathematics and Further Mathematics.

PROJECTS & OTHER EXPERIENCE

Personal project (2024) • Used Python, Pandas, and Scikit-learn to build a graph-based encounter generator tool for D&D players, **used over 1,000 times**. Parsed, filtered, and processed ~100K rows of relevant data, predicted graph connections using machine learning, and built project front-end using React ([view here](#)).

Competitions • Enjoyed **challenges** including the competitions listed below, working with teams of friends to develop **teamwork and communication**, as well as build technical skills, and experience building a product from start to finish. Research project done for a module at Imperial.

Group Research Project (June 2024) • In a team of five, researched topic in statistical physics, produced simulations, wrote a paper and presented our findings to researchers. Achieved 93%.

IBM Z Datathon (Autumn 2023) • Working in a team, used React to build the front-end for a webapp that used ML and web scraping to summarise the ethical implications of using a company's goods.

Global Power Rankings (Autumn 2023) • Used esports match data to evaluate team performance and build a power ranking, using traditional sports and machine learning algorithms.

Citadel's Terminal Invitational (Summer 2023) • Worked in a team to write an algorithm to play 'Terminal', an online game, which then competed against other algorithms from around the world.

Volunteering • Volunteered in local woodland to remove invasive flora and assisted with local events including Remembrance parades and bonfire night festivities, and renovating children's schools through HSBC volunteering program.
